TEST REPORT FIRES-FR-112-15-AUNE

Cable bearing system BAKS with cables business TECHNOKABEL S.A.

Reg. No. 041/S-159

The Experts on Fire Safety

TEST REPORT

FIRES-FR-112-15-AUNE

Tested property:	Functional resistance in fire
Test method:	STN 92 0205: 2014 (ZP-27/2008, DIN 4102-12: 1998-11) acc. to cl. 1 of this test report
Type of test:	Accredited
Date of issue:	01. 07. 2015
Name of the product:	Cable bearing system BAKS with cables business TECHNOKABEL S.A.
Manufacturer:	BAKS Kazimierz Sielski, ul. Jagodne 5, 05-480 Karczew, Poland (producer of cable bearing system) TECHNOKABEL S.A., Nasielska 55, 04 – 343 Warszawa, Poland (producer of cables)
Sponsor:	BAKS Kazimierz Sielski, ul. Jagodne 5, 05-480 Karczew, Poland
Test carried out by:	FIRES, s.r.o., Testing laboratory
Task No.:	PR-15-0180
Specimens received:	22. 05. 2015
Date of the test:	28. 05. 2015

Technician responsible for the technical side of this report: Bc. Dávid Šubert

Number of pages: 65
Test reports: 5 Copy No.: 2

This report includes accreditation mark SNAS with additional mark ILAC-MRA. SNAS is signatory of ILAC-MRA, Mutual recognition agreement (of accreditation), which is focused on promoting of international acceptance of accredited laboratory data and reducing technical barriers to trade, such as the retesting of products on markets of signatories. More information about ILAC-MRA is on www.ilac.org. Signatories of ILAC-MRA are e.g. SNAS (Slovakia), CAI (Czech Republic), PCA (Poland), DakkS (Germany) or BMWA (Austria). Up to date list of ILAC-MRA signatories is on www.ilac.org/documents/mra_signatories.pdf. FIRES, s.r.o. Batizovce is full member of EGOLF also, more information www.egolf.org.uk.

Notified Body No. 1396, Approved Body No. SK01, Member of EGOLF

1. INTRODUCTION

This test report contains the results of test carried out by FIRES, s.r.o., Testing laboratory in Batizovce, accredited by SNAS for testing. Certificate of accreditation No.: S-159. The purpose of the test was to gain information for product classification.

Test of function in fire was carried out according to standard STN 92 0205. Similar standards and regulations for tests of function in fire are ZP-27/2008 PAVUS and DIN 4102-12: 1998-11.

Deviations from standard at the test according to ZP-27/2008: This test was carried out according to standard STN 92 0205 and meets also all requirements of ZP-27/2008 and test results can be directly used for classification of tested cables according to ZP-27/2008. There are no deviations identified in process and carrying out of test.

Deviations from standard at the test according to DIN 4102-12: 1998-11: This test was carried out according to standard STN 92 0205 and meets requirements of DIN 4102-12: 1998-11. Basic deviation in process and carrying out of test between these standards is in measuring and in control of temperature in the test furnace. According to STN 92 0205, plate thermometers according to EN 1363-1 are used. According to DIN 4102-12: 1998-11, common thermocouples of construction which was used for this measurement till issue of EN 1363-1 are used. Measurement by plate thermometers acc. to EN 1363-1 can be considered as stricter method of temperature control in test furnace in compare with thermocouples used till issue of EN 1363-1. Therefore, it is possible to use results of test according to STN 92 025 for classification of tested cables according to DIN 4102-12: 1998-11, but not conversely. Identified deviation results in stricter course of test and it can lead to reduced classification of tested cables what is accepted as enhanced security in practice.

Sponsor's representatives witnessing the test:

Mr. Tomasz Żukowski	BAKS Kazimierz Sielski
Mr. Dariusz Gowronski	BAKS Kazimierz Sielski
Mr. Mariusz Kwiatkowski	TECHNOKABEL S.A.
Mr. Pavel Stradomski	TECHNOKABEL S.A.

test directed by	Ing. Marek Gorlický
test carried out by	Bc. Dávid Šubert
operator	Miroslav Hudák

2. MEASURING EQUIPMENT

Identification number	Measuring equipment	Note
F 90 004	Horizontal test furnace for fire resistance testing	-
F 69 010	PLC system for data acquisition and control TECOMAT TC 700	-
F 40 019	Visual and calculating software to PLC TECOMAT TC 700	-
F 40 017	Control and communication software to PLC TECOMAT TC 700	-
F 40 018	SW Reliance	-
F 40 020	Driver Tecomat - Reliance (SW)	-
F 71 041, F 71 042	Transducer of differential pressure (–50 to + 150) Pa	measurement of pressure inside the test furnace
F 54 064	Digital calliper (0 to 160) mm	-
F 54 056	Racking meter	-
F 69 009	PLC system for data acquisition and climate control TECOMAT TC 604	-

Identification number	Measuring equipment	Note
F 60 001 - F 60 009	Sensors of temperature and relative air humidity	measurement of climatic conditions
F 10 521 - F 10 528	Plate thermometers	measurement of temperature inside the test furnace according to EN 1363-1
F 10 701	Sheathed thermocouple type K Ø 3 mm	measurement of ambient temperature
F 57 007	Digital stop-watch	-
F 96 015	Test signal panel	-

3. PREPARATION OF THE SPECIMENS

Testing laboratory didn't take off individual components of the specimens. Components take-off and its delivering to the testing laboratory were carried out by the test sponsor. Assembling of the supporting system into the test furnace and mounting of cables and weights into the supporting system was carried out by workers of BAKS Kazimierz Sielski and TECHNOKABEL S.A. under supervision of laboratory technician.

4. PREPARATION OF THE TEST

4.1 DESCRIPTION OF THE SPECIMEN STRUCTURE

Test specimen comprised from cable bearing system of company BAKS Kazimierz Sielski – cable trays, mesh trays, ladders, cable clips and hangers with accessories (consoles, brackets, supports, hangers, etc.) and power and communication halogen free cables of company TECHNOKABEL S.A..

Cables
Used cables by test:

Power cables:

NHXH FE180 PH90/E90 1x16 RM 0,6/1 kV	(6x)
NHXH FE180 PH90/E90 1x240 RM 0,6/1 kV	(6x)
NHXH-J FE180 PH90/E90 4x1,5 RE 0,6/1 kV	(15x)
NHXH-J FE180 PH90/E90 4x16 RM 0,6/1 kV	(2x)
NHXH-J FE180 PH90/E90 4x50 RM 0,6/1 kV	(12x)
NHXCH FE180 PH90/E90 4x1,5/1,5 RE 0,6/1 kV	(6x)
NHXCH FE180 PH90/E90 4x50/25 RM 0,6/1 kV	(6x)
(N)HXCH FE180 PH90/E90 4x1,5/1,5 RE 0,6/1 kV	(8x)
(N)HXCH FE180 PH90/E90 4x50/25 RM 0,6/1 kV	(8x)
(N)HXH-J FE180 PH90/E90 4x1,5 RE 0,6/1 kV	(19x)
(N)HXH-J FE180 PH90/E90 5x16 RE 0,6/1 kV	(2x)
(N)HXH-J FE180 PH90/E90 4x50 RM 0,6/1 kV	(16x)

Communication cables:

HTKSH FE180 PH90/E30-E90 1x2x0,8 mm 240 V	(18x)
HTKSHekw FE180 PH90/E30-E90 1x2x0,8 mm 240 V	(10x)
HTKGs FE180 PH90/E30 2x0,75 mm^2 110 V	(2x)
HDGs FE180 PH90/E30-E90 2x1 mm^2 300/500 V	(16x)
HDGsekw FE180 PH90/E30-E90 2x1 mm^2 300/500 V	(4x)

The length of cables was 5,2 m and 4,0 m from that was exposed to fire.

Cable bearing systems were made of following constructions:

Suspension tracks No. 1 and 12
Tracks are made of four consoles (WPCB1000) fixed to ceiling by throughbolt anchors (R-HPT II A4-10) in spacing of 1500 mm.

Cable ladders (DUP600H60, height 60 mm, width 600 mm, steel sheet thickness 1,5 mm, spacing of transoms 300 mm) fixed together by junctions (LDC/LDOCH60, 2 pcs) and nut bolts (SGK M8x14, 8 pcs) on sides. Ladders are fixed vertically to consoles by brackets (UTM/UTMO) and nut bolts (SGK M8x14) and loaded with 25kg.m^{-1}. Cables are fixed to ladders by cable clamps (UK1/UKO1).

Wall track No. 2
Brackets (WWS/WWSO300) are fixed to wall by anchors STR in spacing of 1500 mm.

Cable trays (KFL300H60, height 60 mm, width 300 mm, steel sheet thickness 0,7 mm) fixed together by integrated junctions and one screw (SGK M6x12) on each side. Trays are fixed to brackets by screws (SGK M6x12) and loaded with 8kg.m^{-1}. Cables are not fixed to cable trays.

Suspension tracks No. 3 – 8
Tracks are made of four consoles combined of three supports (CWP40H22/05) and two threaded rods (PG M12) fixed together by washers (PP12) and nuts (NS M12). Consoles are fixed to ceiling by internally threaded wedge anchors (R-DCA 12) in spacing of 1500 mm.

Tracks No. 3, 4 and 7:
Cable mesh trays (KDS/KDSO400H60, height 60 mm, width 400 mm, steel wire ∅ 4,5 mm) fixed together by junctions (USS/USSO, 5 pcs). Partition (PGJ50) is fixed by screws (SGF M6x12) in distance of 100 mm of mesh tray side (only track No. 7). Mesh trays are fixed to supports by junctions (ZS/ZSO, 2 pcs) and loaded with 20kg.m^{-1}. Cables are fixed to mesh trays by cable clamps (UKZ1/UKZO1). Fireboxes (PMO1) are fixed directly to side of cable mesh trays (track No. 3).

Track No. 5 and 8:
Cable trays (KGJ/KGOJ400H60, height 60 mm, width 400 mm, steel sheet thickness 0,9 mm) fixed together by screws (SGK M6x12, 7 pcs). Partition (PGJ60) is fixed by screws (SGF M6x12) in distance of 100 mm of cable tray side. Trays are fixed to supports by screws (SGK M6x12) and loaded with 20kg.m^{-1}. Cables are not fixed to cable trays.

Track No. 6:
Cable ladders (DUD400H60, height 60 mm, width 400 mm, steel sheet thickness 1,2 mm, spacing of transoms 300 mm) fixed together by junctions (LDC/LDOCH60, 2 pcs) and nut bolts (SGK M8x14, 8 pcs) on sides. Partition (PGDJ60) is fixed by screws (SGF M6x12) in distance of 100 mm of ladder side. Ladders are fixed to supports by junctions (ZM/ZMO, 2 pcs) and nut bolts (SGK M8x14, 2 pcs) and loaded with 20kg.m^{-1}. Cables are fixed to ladders by cable clamps (UK1/UKO1). Fireboxes (PMO2) are fixed directly to side of cable ladders.

Suspension track No. 9
Track is made of four consoles (WPDH500) fixed to ceiling throughbolt anchors (R-HPT II A4-10) in spacing of 1500 mm. Brackets (WWCH600) are fixed to consoles by integrated screws.

Cable ladders (DUP600H60, height 60 mm, width 600 mm, steel sheet thickness 1,5 mm, spacing of transoms 300 mm) fixed together by junctions (LDC/LDOCH60, 2 pcs) and nut bolts (SGK M8x14, 8 pcs) on sides. Ladders are fixed to brackets by nut bolts (SGK M8x14) and loaded with 25kg.m^{-1}. Cables are fixed to ladders by cable clamps (UK1/UKO1).

Floor tracks No. 10 and 11
Tracks are made of four consoles (WPDH1000) fixed alternately to concrete lintels by anchor bolts M10 in spacing of 1000 mm. Brackets (WWCH600) are fixed to consoles by 2 pcs of integrated screws.

Cable ladders (DUP600H60, height 60 mm, width 600 mm, steel sheet thickness 1,5 mm, spacing of transoms 300 mm) fixed together by junctions (LDC/LDOCH60, 2 pcs) and nut bolts (SGK M8x14, 8 pcs) on sides. Ladders are fixed to brackets by nut bolts (SGK M8x14) and loaded with 40kg.m^{-1}. Cables are fixed to ladders by cable clamps (UK1/UKO1).

Wall track No. 13
Brackets (WWS/WWSO300) are fixed to wall by chemical anchors (R-KEM) and threaded rods (PG M8) in spacing of 1500 mm.

Cable ladders (DUD300H60, height 60 mm, width 300 mm, steel sheet thickness 1,2 mm, spacing of transoms 300 mm) fixed together by junctions (LDC/LDOCH60, 2 pcs) and nut bolts (SGK M8x14, 8 pcs) on sides. Ladders are fixed to brackets by junctions (ZM/ZMO, 2 pcs) and nut bolts (SGK M8x14, 2 pcs) and loaded with 8kg.m^{-1}. Cables are fixed to ladders by cable clamps (UK1/UKO1).

Suspension track No. 14
Track is made of plastic pipes (HF) fixed to trapezoidal steel sheets (it represent roof construction) on ceiling by clips (UDF) and steel self-drilling screws (SMD4,8x16) in spacing of 600 mm. Cables are embedded inside the pipes. Threaded rods (PG M8) are fixed to trapezoidal sheet by hanger (WT/WTO120) in distance of 600 mm from front and rear wall of furnace. Plastic pipes are fixed to threaded rods vertically by clips (KSA) in distance ~ 600 mm. Threaded rods are loaded with 10 kg.

Suspension tracks No. 15 and 16
Tracks are made of hangers (WSKD60) fixed to ceiling by threaded rods (PG M6) and internally threaded wedge anchors (R-DCA 06 / TRSO M6) in spacing of 1500 mm.

Cable mesh trays (KDS/KDSO60H60, height 60 mm, width 60 mm, steel wire ∅ 4,5 mm) fixed together by junctions (USS/USSO, 2 pcs). Mesh trays are laid in hangers (WSKD) and loaded with 0,75kg.m^{-1}. Cables are not fixed to mesh trays.

Suspension tracks No. 17 and 18
Tracks are made of hangers (WSKD100) fixed to ceiling by threaded rods (PG M6) and internally threaded wedge anchors (R-DCA 06 / TRSO M6) in spacing of 1500 mm.

Cable mesh trays (KDS/KDSO100H60, height 60 mm, width 100 mm, steel wire ∅ 4,5 mm) fixed together by junctions (USS/USSO, 2 pcs). Mesh trays are laid in hangers (WSKD) and loaded with 2,4kg.m^{-1}. Cables are not fixed to mesh trays.

Ceiling track No. 19
Track is made of steel pipes RU (Ø 15 mm, Ø 63,5 mm) fixed to ceiling by hangers (OBS), threaded rods (PG M6) and internally threaded wedge anchors (R-DCA 06) in spacing of 1500 mm. Cables are embedded inside the pipes. Steel pipes are at mid-length separated without offset.

Ceiling track No. 20
Track is made of double cable clips (UDFB) fixed to steel profiles (DPH) on ceiling by steel nails (R-KSC-6/15) in spacing of 600 mm. Nails are fixed by gas powered nailer (R-RAWL-SC40).

Ceiling track No. 21
Track is made of single cable clips (UDF) fixed to steel profiles (DPH) on ceiling by steel self-drilling screws (Ø5,5x32 – ON55032) in spacing of 600 mm.

All bearing systems were from steel, galvanized according to the Sendzimir method PN-EN 10327:2005.
Cable penetration through the wall of test furnace was sealed by mineral wool.
Loading with steel chain and line loads was used as the equivalent load.

More detailed information about construction of specimens is shown in the drawings which form an integral part of this test report. Drawings were delivered by sponsor.

All the information about technical specifications of used materials and semi-products, information about their type sign were delivered by sponsor. This information was not subject of the inspection of specimens. Parameters which were checked are quoted in paragraph 4.3.

4.2 DESCRIPTION OF THE SPECIMENS FIXATION

The test specimens were fixed on the ceiling of the test furnace which was created from concrete panels made of common shocked concrete of class B 20, 150 mm thick – 4 pieces and to side walls made of aerated concrete blocks YTONG, 250 mm thick.

The type of specimen's fixation into the test furnace is shown in drawing documentation and it was selected by the sponsor.

4.3 INSPECTION OF THE SPECIMENS

The conformity of the drawings and the test specimens was checked before and after the fire resistance test. The specimens corresponded to the drawings which are part of this test report. The visual review of the test specimens, the used materials as well as the size verification (number and cross sections of conductors, thickness, measurements of cables and trays) and also the way of specimens fixation to supporting construction were subject of this inspection.

4.4 CLIMATIC CONDITIONING OF THE SPECIMENS

Test specimens were stored in the hall of testing laboratory under the following climatic conditions:

Ambient air temperature [°C]

mean	19,5
standard deviation	1,1

Relative air humidity [%]

mean	42,5
standard deviation	1,9

The humidity equilibrium state of test specimens was not determined. Test specimens did not comprise hygroscopic materials.

5. CARRYING OUT OF THE TEST

5.1 TEST GENERALLY

The test was carried out in horizontal test furnace with dimensions of (4000 x 3000 x 3000) mm (length x width x height).

5.2 CONDITIONS OF THE TEST

Conditions in the test furnace (temperature – standard temperature/time curve, pressure, content of O_2) as well as in the testing room (ambient temperature) corresponded to EN 1363-1 during the test. Detailed information is part of this test report.

Values characterizing environment in the testing room directly before the test:

Relative air humidity [%]	**Ambient air temperature [°C]**
50,1	17,9

5.3 RESULTS OF THE TEST

Measured values of individual cables are stated in this test report.
During the test there was a gradual deflection of cable bearing system, but no failure or damage of tracks – even during cooling down of the tracks after termination of the test. Deflection of cable bearing system was not measured.

6. CLOSING

Evaluation of the test:

Specimen No.	Cables	Track No.	Time to first failure / interruption of conductor
1	2 cables NHXH-J FE180 PH90/E90 4x50 RM 0,6/1 kV	**13**	90 minutes no failure / interruption
2	2 cables NHXH-J FE180 PH90/E90 4x1,5 RE 0,6/1 kV		90 minutes no failure / interruption
3	2 cables (N)HXCH FE180 PH90/E90 4x50/25 RM 0,6/1 kV	**12**	90 minutes no failure / interruption
4	2 cables (N)HXH-J FE180 PH90/E90 4x50 RM 0,6/1 kV		83 minutes
5	2 cables (N)HXCH FE180 PH90/E90 4x1,5/1,5 RE 0,6/1 kV		90 minutes no failure / interruption

The fire test was discontinued in 94th minute at the request of test sponsor.

Specimens S1 – S51 were tested by three-phase voltage supply 3 x 230/400V with bulbs 240V / 60 W.
Specimens S52 – S75 were tested by one-phase voltage supply 1 x 110V with LED diodes 3V /0,03W.

Circuit breakers with rating 3 A were used.

7. DIRECT APPLICATION OF TEST RESULTS

Direct field of application is valid in accordance with STN 92 0205: 2014 (cl. 7), ZP-27/2008 (cl. 11) and DIN 4102-12: 1998-11 (clause 8). Validity of individual items of field of direct application shall be determined in classification process.

ISO 9001:2008

(N)HXH FE180 PH90/E90 0.6/1 kV; (N)HXH-J FE180 PH90/E90 0.6/1 kV

FIRE RESISTANT HALOGEN FREE POWER CABLES

APPLICATIONS

(N)HXH FE180 PH90/E90 0.6/1 kV and **(N)HXH-J FE180 PH90/E90 0.6/1 kV** fire resistant power cables, insulated and sheathed with halogen free compounds, are intended for power supply to fire protection equipment which is to operate in fire conditions (e.g. water pumps in fire extinguishing systems, smoke removing fans).

Halogen free cables shall be applied in locations where, in case of fire, higher safety for human beings and expensive electronic equipment is required.

Functions of the cables are maintained – power is supplied to equipment which must operate in fire conditions and during fire fighting. The cables are flame retardant and their smoke emission is low, emitted fumes are non toxic and non corrosive.

The cables are certified by Scientific and Research Development Centre for Fire Protection (Centrum Naukowo-Badawcze Ochrony Przeciwpożarowej) at Józefów.

The cables are suitable for indoor and outdoor installations.

CONSTRUCTION

conductor	–	bare copper, solid or stranded, according to PN-EN 60228, EN 60228, **RE** - single wire round conductor; **RM** - multiwire round conductor
insulation	–	double insulation ,cross-linked silicone rubber - colours in accordance with PN-HD 308,
filler	–	filler made of halogen free compound,
inner sheath	–	inner sheath made of halogen free compound,
sheath	–	orange, cable sheath made of halogen free compound according to HD 604 S1 and VDE 0276-604 –HM4, (oxygen index bigger than 35%).

CHARACTERISTICS

The cables maintain their functions for 90 minutes, meeting requirements of DIN 4102-12 and PN-EN 50200 standards

Operating voltage	0.6/1 kV
Voltage test	4.0 kV rms
Insulation resistivity at 90°C, minimum	10^{11} Ω·cm
Inductance, approximate	0.7 mH/km
Conductor temperature limit	
in work conditions	+ 90°C
at short-circuit	+ 250°C
Corrosivity of emitted gases per PN-EN 50267-2-3, IEC 60754-2	
pH, approximate	6.8
conductivity, approximate	0.4 µS/mm
Smoke density per PN-EN 61034-2, IEC 61034-2	
light transmittance, minimum	94%

Operating temperature range	
during operation	from -30 to +90°C
during installation	from -5 to +50°C
Minimum bending radius:	single core cables -15 x cable diameter multi core cables -12 x cable diameter
Cable combustibility	flame retardant
Circuit integrity *	
E90	DIN 4102-12
PH90	PN-EN 50200 or PN-EN 50362
Insulation integrity FE180	IEC 60331-21; IEC 60331-11
Combustibility tests	PN-EN 50266-2-4, IEC 60332-3-24 PN-EN 50200 and PN-EN 50362
Reference standards	AT-0603-0064/2010/2012, WT-TK-44 DIN VDE 0266, PN-HD 604 S1

* Circuit integrity is dependent on installation method.

CE = the cable meets requirements of the low voltage directive 2006/95/WE

TECHNOKABEL®

ISO 9001:2008

NHXH FE180 PH90/E90 0,6/1 kV, NHXH-J FE180 PH90/E90 0,6/1 kV

KABLE ELEKTROENERGETYCZNE OGNIOODPORNE, BEZHALOGENOWE

ZASTOSOWANIE

Kable elektroenergetyczne ognioodporne **NHXH FE180 PH90/E90 0,6/1 kV** i **NHXH-J FE180 PH90/E90 0,6/1 kV** o izolacji i powłoce z tworzyw bezhalogenowych, przeznaczone są do stosowania w instalacjach gdzie wymagane jest zapewnienie bezpieczeństwa ludzi i wyposażenia ze szczególnym uwzględnieniem instalacji przeciwpożarowych.

Kable powinny być instalowane w budynkach i obiektach o podwyższonych wymaganiach przeciwpożarowych, gdzie niezbędne jest większe bezpieczeństwo ludzi i kosztownych urządzeń elektronicznych (tunele metra, szpitale, centra handlowe, supermarkety, kina, teatry, stadiony oraz inne budynki użyteczności publicznej). **Kable zapewniają podtrzymanie funkcji elektrycznych instalacji przez 90 minut**, tj. zapewnienie dopływu energii elektrycznej do urządzeń, których działanie jest niezbędne podczas ewakuacji ludzi i gaszenia pożaru (np. zasilania pomp wodnych instalacji przeciwpożarowych, wentylatorów oddymiających, klap dymowych, oświetlenia bezpieczeństwa i ewakuacyjnego, wind strażackich).

Kable posiadają **Certyfikat Zgodności** i **Świadectwo Dopuszczenia** wystawione przez Centrum Naukowo-Badawcze Ochrony Przeciwpożarowej w Józefowie.

Kable nie rozprzestrzeniają płomienia, emisja dymu jest bardzo niska, a emitowane gazy są nietoksyczne i niekorozyjne.

Wykorzystywane są do ułożenia na stałe wewnątrz i na zewnątrz budynków. Dla instalacji zewnętrznych musi być zapewniona osłona przed promieniowaniem ultrafioletowym (UV). Przy zastosowaniu dodatkowego zabezpieczenia przed wodą i wilgocią, kable mogą być układane w wodzie i bezpośrednio w ziemi.

BUDOWA

- żyły z miękkich drutów miedzianych wg PN-EN 60228,
  RE - jednodrutowe okrągłe klasy 1,
  RM - wielodrutowe okrągłe klasy 2,
- izolacja żył wykonana z taśmy mikowej i tworzywa bezhalogenowego usieciowanego, kolory izolacji żył:
  wg normy PN-HD 308,
  lub czarny z nadrukowanymi białymi numerami żył,
  w kablu NHXH-J FE180 PH90/E90 0,6/1 kV zielono-żółta żyła ochronna umieszczona w warstwie zewnętrznej,
- żyły izolowane skręcone warstwowo w ośrodek,
- powłoka wypełniająca wykonana z materiału bezhalogenowego,
- powłoka kabla wykonana z materiału bezhalogenowego (HFFR) o własnościach wg PN-HD 604 S1 i VDE 0276-604 - HM4, (indeks tlenowy > 35%) w kolorze pomarańczowym.

ISO 9001:2008

HTKSH FE180 PH90/E30-E90, HTKSHekw FE180 PH90/E30-E90

FIRE RESISTANT HALOGEN FREE CABLES

APPLICATIONS

HTKSH FE180 PH90/E30-E90 and HTKSHekw FE180 PH90/E30-E90 fire resistant and halogen free cables are intended for installation in alarm, signalling, transmission, sound warning and similar systems, also for data processing systems and for analogue or digital data transmission in industrial electronics and control applications in objects of sharp fire protection requirements, particularly in fire alarm and fire automatic control systems.

Halogen free cables are applied in locations where, in case of fire, higher safety for human beings and expensive electronic equipment is required.

Functions of the cables are maintained – data are transmitted and power is supplied to equipment which must operate in fire conditions and during fire fighting (e.g. emergency lighting). The cables are flame retardant and their smoke emission is low, emitted fumes are non toxic and non corrosive.

Cable circuits are protected by an overall electrostatic shield against external electric field interferences.

The cables are suitable for indoor installations.

CONSTRUCTION

conductor	–	bare copper, solid,
insulation	–	mica tape and halogen free compound insulation - colours in accordance with PN-92/T-90321 standard,
pair	–	insulated conductors twisted into pairs,
cable core	–	pairs laid-up into a cable core,
separator	–	polyester tape,
shielding	–	overall electrostatic shield incorporating a plastic laminated metal foil and a tinned copper drain wire – only in **HTKSHekw FE180 PH90/E30-E90**,
sheath	–	red, cable sheath made of halogen free compound according to EN 50290-2-27 and VDE 0250-214 – HM2.

HLGs(żo) FE180 PH90/E30-E90, HLGsekw(żo) FE180 PH90/E30-E90

FIRE RESISTANT HALOGEN FREE POWER CABLES

APPLICATIONS

HDGs(żo) FE180 PH90/E30-E90 300/500 V, HLGs(żo) FE180 PH90/E30-E90 300/500 V fire resistant cables and **HDGsekw(żo) FE180 PH90/E30-E90 300/500 V, HLGsekw(żo) FE180 PH90/E30-E90 300/500 V** screened fire resistant cables, are intended for power supply to fire protection equipment which is to operate in fire conditions. The cables are suitable for installation in alarm, signalling, transmission, sound warning and similar systems.

Halogen free cables shall be applied in locations where, in case of fire, higher safety for human beings and expensive electronic equipment is required.

Functions of the cables are maintained – power is supplied to equipment which must operate in fire conditions and during fire fighting. The cables are flame retardant and their smoke emission is low, emitted fumes are non toxic and non corrosive.

The cables are certified by Scientific and Research Development Centre for Fire Protection (Centrum Naukowo-Badawcze Ochrony Przeciwpożarowej) at Józefów.

An overall electrostatic shield **(ekw)** in screened cables protects cable circuits against interference by external electric fields.

CONSTRUCTION

– bare copper, single wire **(D)** or stranded multi wire **(L)**, round conductors meeting requirements of class 1 or 5 per PN-EN 60228,

– special silicone rubber insulation,

– identification colour code according to PN-HD 308 S2,

– insulated conductors laid-up in layers,

– cable core wrapped in polyester tape - in **HDGsekw** and **HLGsekw**,

– overall electrostatic shield incorporating aluminium-polyester tape and stranded annealed tinned copper drain wire - in **HDGsekw** and **HLGsekw**,

– red cable sheath of halogen free compound.

8. FINAL PROVISION

§ This report details the method of construction, the test conditions and results obtained when the specific element of construction described herein was following the procedure outlined in EN 1363-1, and where appropriate STN 92 0205. Any significant deviation with respect to size, constructional details, loads, stresses, edge or end conditions other than those allowed under the field of direct application in the relevant test method is not covered by this report.

§ Because of the nature of the fire resistance testing and consequent difficulty in quantifying the uncertainty of measurement of fire resistance, it is not possible to provide a stated degree of accuracy of the result.

§ The test results refer only to the tested subjects. This test report is not an approval of the tested product by the test laboratory or the accreditation body overseeing the laboratory's activities. The test was carried out on testing equipment that is the property of FIRES, s.r.o., Batizovce. Without the written permission of the test laboratory this test report may be copied and/or distributed only as the whole. Any modifications of the test report can be made only by the fire resistance test laboratory FIRES, s.r.o., Batizovce.

Approved by:

Ing. Štefan Rástocký
leader of the testing laboratory

Prepared by:

Bc. Dávid Šubert
technician of the testing laboratory

STN 92 0205:2014	Fire behaviour of construction products and building constructions. Circuit integrity maintenance of cable systems. Requirements, testing and classification.
DIN 4102 – 2:1977-09	Fire behaviour of building materials and elements - requirements and testing
DIN 4102 – 12:1998-11	Fire resistance of electric cable systems required to maintain circuit integrity
ZP-27/2008 PAVUS	Test method for determination of functionality class of cables and cable loadbearing constructions - cable circuits in case of fire

THE END OF THE TEST REPORT
